PROJECT AT A GLANCE

Brand	McDonald's - Big Mac digital ad campaign
Tools	iMotions (Eye Tracking) · Qualtrics (Survey)
Target	Adults 18–35, Chicago, IL
Sample	N = 6 participants · n = 3 per stimuli
Stimuli	Version A: Product-forward · Version B: Emotion-forward
Key AOs	Logo · Headline · Product / Face · Social Proof · CTA

Background

McDONALD'S

Founded

1940

San Bernardino, CA

"i'm lovin' it"

Global campaign since 2003

Market Cap

\$220-240B

Record high: Feb 2026

Company Overview

Fast food's most recognizable global brand

40,000+

Restaurants Worldwide

in 100+ countries

\$25.5B

Annual Revenue

2023 figure

95%+

Franchised Locations

franchise-operated

\$30B+

Digital Sales 2025

~20% of system revenue

2,276

New Units Opened 2025

2,600 planned for 2026

\$140B+

Systemwide Sales

Global sales across all restaurants

Business model: 95%+ franchised · Owns \$37.7B in real estate · Target: 50,000 total locations

Objective

Using eye-tracking and consumer neuroscience to understand how emotionally driven vs. product-focused McDonald's advertisements influence:

- Visual attention
- Emotional engagement
- Purchase intention

Analyze consumer attention using:

- AOIs (Areas of Interest)
- Fixation duration
- Dwell time
- Time to first fixation

We expect Version A to perform better because:

- Product-focused layout creates stronger visual salience and consumption cues
- Faster System 1 decision-making: Big Mac image bypasses rational processing
- Version B's face creates cognitive load, diverting attention from product & CTA

Hypothesis

Participants exposed to Version A are expected to demonstrate:

- Greater fixation duration on the burger (product) AOI
- Higher dwell time on the product image and CTA
- Stronger overall visual attention
- Higher purchase intention

Participants exposed to Version B may show:

- Greater emotional engagement toward the facial AOI
- Increased cognitive load from emotional imagery
- Attention diverted away from product and logo AOIs
- Lower immediate purchase intent

Therefore, Version A is expected to be more effective in driving advertising effectiveness and purchase intent

- Product-focused layout creates stronger visual salience and consumption cues
- Faster System 1 decision-making via clear brand-product association

Stimuli Comparison A vs. B

VERSION A
Product-Focused

BAD DAY?
BITE INTO BETTER.

Millions already
love the Big Mac.
You will too.

★★★★★
#1 Choice for
comfort food

GRAB YOURS TODAY.

McDonald's logo
i'm lovin' it

A close-up of a Big Mac burger with sesame seed bun, beef patties, pickles, onions, ketchup, mustard, and Swiss cheese, next to a red McDonald's cup of fries.

VERSION B
Emotion-Focused

FEELING LOW?
WE'VE GOT YOUR CURE.

Over 1 BILLION served.
There's a reason.

One bite changes
everything.

★★★★★
#1 Choice for
comfort food

GRAB SOME TODAY.

McDonald's logo
i'm lovin' it

A woman with long dark hair looking down sadly, with a red McDonald's cup of fries in the foreground.

Stimuli Comparison

Two ad concepts tested · A vs B

VERSION A

BAD DAY?
BITE INTO BETTER.

Millions already love the Big Mac.
You will too.

★★★★★
#1 Choice for comfort food

GRAB YOURS TODAY.

McDonald's logo: **M**
i'm lovin' it

The advertisement features a close-up of a Big Mac burger with sesame seed buns, lettuce, cheese, and pickles, next to a red McDonald's cup filled with golden french fries. The background is dark and slightly blurred, focusing attention on the food.

VERSION B

FEELING LOW?
WE'VE GOT YOUR CURE.

Over 1 BILLION served.
There's a reason.

One bite changes everything.

★★★★★
#1 Choice for comfort food

GRAB SOME TODAY.

McDonald's logo: **M**
i'm lovin' it

The advertisement features a woman with long dark hair looking down with a sad expression. In the background, a red McDonald's cup filled with golden french fries is visible. The background is dark and slightly blurred, focusing attention on the woman and the fries.

Areas of Interest

5

Areas of Interest (AOIs)

01 Logo

02 Headline

03 Product / Face

04 Social Proof (Rating)

05 CTA (Call to Action)

VERSION A - PRODUCT-FOCUSED

BAD DAY?
BITE INTO BETTER.

Millions already love the Big Mac.
You will too.

★★★★★
#1 Choice for comfort food

GRAB YOURS TODAY.

McDonald's logo with "i'm lovin' it" tagline.

This advertisement features a close-up of a Big Mac burger with sesame seed buns, cheese, and pickles. In the background, a red McDonald's cup filled with fries is visible. The text is bold and clear, emphasizing the product and the satisfaction it brings.

VERSION B - EMOTION-FOCUSED

FEELING LOW?
WE'VE GOT YOUR CURE.

Over 1 BILLION served.
There's a reason.

One bite changes everything.

★★★★★
#1 Choice for comfort food

GRAB SOME TODAY.

McDonald's logo with "i'm lovin' it" tagline.

This advertisement features a woman with long dark hair looking down with a sad expression. A red McDonald's cup filled with fries is visible in the foreground. The text is bold and clear, emphasizing the emotional connection and the comfort food offered.

Study Design, Methodology & Data Collection

STEP 1
Stimuli Exposure

STEP 2
Eye Tracking via iMotions

STEP 3
Survey via Qualtrics

STEP 4
AOI & ANOVA Analysis

Heatmaps Comparison A vs. B

VERSION A

Stimulus Version A - Product-Focused

VERSION B

Stimulus Version B - Emotion-Focused

About our sample

Demographics

☐ Female
 ☐ Male
 ☐ Non-binary

☐ 25-29
 ☐ 30-34
 ☐ 21-24

Geographics

- All respondents are located in the Chicago area
- The data reflects perspectives from individuals with an urban Midwestern population

Psychographics

- Respondents value **convenience** when choosing meals
- Respondents prefer **quick & affordable** dining options
- Respondents have **high familiarity** with the McDonald's brand (100%)
- Fast food aligns with respondents' **busy lifestyles**

Behaviors

- **About 50%** of respondents regularly ate fast food throughout the week
- **About 67%** of respondents recently purchased McDonald's
- Social media is the most common advertising channel among respondents indicating **regular use of social media**
- Respondents demonstrate **repeat fast food purchasing habits**

01

Eye-Tracking Study

- Consent collected
- Viewed McDonald's ad Version A or B
- Eye movements tracked via iMotions

02

Post-Study Survey

- Follow-up questions via Qualtrics
- Behavioral & demographic items
- Lifestyle (psychographic) items
- Advertisement-focused items

03

Data Analysis

- iMotions heatmaps
- Bee-swarm gaze plots
- AOI metrics
- Survey responses

04

Conclusions

- Evaluated ad effectiveness
- Compared consumer attention
- Compared purchase intent across both ads

Study design, methodology, & data collection

Eye tracking study

- Consent collected
- Participants viewed McDonald's advertisement version A or B
- Eye movements tracked using iMotions

Post-study survey

- Used Qualtrics to ask follow up questions to participants
- Questions consisted of:
 - Behavioral questions
 - Demographic questions
 - Lifestyle (psychographic) questions
 - Advertisement-focused questions

Data analysis

- iMotions heatmaps, bee swarm videos, AOI metrics, survey data

Conclusions

- Findings were used to evaluate advertising effectiveness, consumer attention, and purchase intent between both ads

Bee Swarm

VERSION A

Gaze point distribution across the advertisement stimulus. Each dot represents a single fixation, color-coded by participant. Shows how gaze is distributed across the image.

Bee Swarm

VERSION B

Gaze point distribution across the emotion-focused advertisement stimulus. Each dot represents a single fixation, color-coded by participant. Concentration on face AOI is notable.

Heatmaps Comparison A vs. B

VERSION A

Stimulus Version A - Product-Focused

VERSION B

Stimulus Version B - Emotion-Focused

A

VERSION A

Product-Focused

Big Mac + Social Proof layout

- Balanced gaze flow across Big Mac, CTA and social proof elements
- 67% Big Mac product recall after exposure (vs. 0% Version B)
- Multiple gaze revisits to burger AOI - stronger visual engagement
- Higher social proof fixations (6.3 vs. 1.0) - key brand signal

B

VERSION B

Emotion-Focused

Expressive face + Emotional headline

- Face AOI captured gaze instantly - Time to First Fixation = 0ms (Vampire Effect)
- Higher headline dwell time (1,700ms vs. 972ms) - only significant finding
- 0% Big Mac product recall - face dominated all visual encoding
- CTA and logo attention significantly reduced vs. Version A

AOI METRICS COMPARISON

METRIC	VERSION A	VERSION B	WINNER
Product (Big Mac) Recall	67% ✓	0% ✗	Version A
Logo Noticeability (fixated)	100% ✓	67%	Version A
Headline Dwell Time	972 ms	1,700 ms ★	Version B (sig.)
Social Proof Fixation Count	6.3 ✓	1.0 ✗	Version A
Ad Clarity Score (1-10)	6.0 ✓	4.7	Version A
Purchase Intent (1-5 scale)	2.0 ✓	1.3	Version A

★ Only statistically significant result: $F(1,4) = 9.95, p = 0.035$

Eye Tracking Study Results

KEY FINDINGS

VERSION A - Product-Focused

- Balanced gaze flow across Big Mac, CTA & social proof
- 67% Big Mac product recall after exposure
- Multiple gaze revisits to burger AOI - stronger visual engagement
- Higher social proof fixations (6.3 vs 1.0)

VERSION B - Emotion-Focused

- Face AOI captured gaze instantly (TTFF = 0ms) - Vampire Effect
- Higher headline dwell time (1,700ms vs 972ms) - only sig. finding
- 0% Big Mac product recall - face dominated encoding
- CTA & logo attention significantly reduced

AOI METRICS COMPARISON

Metric	Version A	Version B
Product (Big Mac) Recall	67% ✓	0% ✗
Brand (McDonald's) Recognition	100% ✓	67%
Headline Dwell Time	972 ms	1,700 ms ★
Social Proof Fixation Count	6.3 ✓	1.0 ✗
Ad Clarity Score (1–10)	6.0 ✓	4.7
Purchase Intent (1–5 scale)	2.0 ✓	1.3

★ Only statistically significant result ($F(1,4) = 9.95, p = 0.035$)

KEY INSIGHT

Emotion captures attention instantly - but product-focused layouts drive stronger product recall, brand clarity, and purchase intention.

ANOVA Results

One-Way ANOVA

WHY ANOVA?

One-Way ANOVA compares means across two independent groups (Version A vs. B). Used to test statistical significance across all AOI metrics.

KEY FINDING

Only Headline Fixation Dwell Time reached statistical significance - all other results are directional only.

ANOVA SUMMARY TABLE - VERSION A VS. VERSION B

MEASURE	VERSION A	VERSION B	F-STATISTIC	P-VALUE	RESULT
Headline Fixation Dwell (ms)	M = 972	M = 1,700	F(1,4) = 9.95	p = 0.035 ★	SIGNIFICANT
Social Proof Dwell (ms)	M = 1,684	M = 508	F(1,3) = 4.06	p = 0.137	Large effect, n.s.
Purchase Intent (1–5 scale)	M = 2.0	M = 1.3	F(1,4) = 0.40	p = 0.563	Not significant
Ad Clarity (1–10 scale)	M = 6.0	M = 4.7	F(1,4) = 0.24	p = 0.651	Not significant

★ Only Headline Fixation Dwell Time reaches statistical significance. All other results are directional only - N ≥ 15 per cell is required for inferential conclusions.

ANOVA Results

Mann-Whitney U Detail

NON-PARAMETRIC CHECK

Mann-Whitney U test used as a non-parametric check alongside One-Way ANOVA. Applied because n=3 per cell - extremely small sample violates ANOVA assumptions.

SAMPLE LIMITATION

N ≥ 15 per cell required for reliable inferential conclusions. Current findings are directional indicators only.

ONE-WAY ANOVA + MANN-WHITNEY U - METRIC BREAKDOWN

Headline Fixation Dwell (ms)

A: M = 972ms B: M = 1,700ms

F(1,4) = 9.95 · p = 0.035 ★

SIGNIFICANT

Social Proof Dwell (ms)

A: M = 1,684ms B: M = 508ms

F(1,3) = 4.06 · p = 0.137

Large effect, n.s.

Purchase Intent (1–5 scale)

A: M = 2.0 B: M = 1.3

F(1,4) = 0.40 · p = 0.563

Not significant

Ad Clarity (1–10 scale)

A: M = 6.0 B: M = 4.7

F(1,4) = 0.24 · p = 0.651

Not significant

★ Only Headline Fixation Dwell Time reaches statistical significance. All other results are directional only - N ≥ 15 per cell is required for inferential conclusions. Mann-Whitney U corroborates ANOVA directionality.

STRATEGIC IMPLICATIONS

Advertising Effectiveness

CORE FINDING

Emotion captures attention - but product clarity drives recall, brand recognition, and purchase intent. A hybrid approach optimizes both.

The Hybrid Approach

01

Combine Version B's emotional headline with Version A's product-focused layout - emotional engagement while maintaining product clarity and brand recall.

Minimize Face Dominance

02

Limit expressive faces that swallow attention from logo and product. The Vampire Effect (TTFF = 0 ms on face) proves faces compete with brand assets.

Product at Eye Level

03

Position the Big Mac at eye level to trigger instant decision-making. Product-forward layout creates stronger visual salience and faster System 1 processing.

CX IMPLICATIONS

Customer Experience Implication

Data-driven ways to improve McDonald's digital touchpoints, reduce cognitive load, and lift purchase intent.

Simplify Digital Menus

01

Reduce textual complexity in digital menus. Visual cues should guide the customer's hunger, not their logic - fewer words, stronger imagery.

"#1 Choice" Social-Proof Badges

02

Integrate "#1 Choice" badges into digital touchpoints. Our data shows these ratings capture high visual engagement and reinforce purchase confidence.

Align CTA with Natural Gaze

03

Place the Call to Action along natural gaze patterns (bottom-right) to increase purchase intent and reduce friction in the decision journey.

WHAT CONSTRAINS THE FINDINGS

Study Limitations

STATISTICAL NOTE

$N \geq 15$ per cell is required for inferential conclusions. Current $N = 6$ ($n = 3$ per condition) supports directional insights only.

Sample Constraints

01

An extremely limited sample ($N = 6$) severely limits statistical power and the ability to detect true effects across all AOI metrics.

Geographic & Demographic

02

The sample was restricted to the Chicago urban area, so psychographic and dining behaviors cannot be generalized to broader populations.

Laboratory vs. Real-World

03

A rigid desktop / iMotions setup fails to capture the realistic, multi-screen, distracted environment in which consumers actually view ads.

IF WE RAN THE STUDY AGAIN

Future Directions

STUDY IMPROVEMENTS

- Increase sample size ($N \geq 30$)
- Add diverse cities, ages & cultures
- Test on mobile & social platforms
- Add facial coding / EEG signals
- Balance emotional vs product stimuli

Hybrid Ad Testing

Test a hybrid ad combining B's emotional headline with A's product-focused layout to capture attention and recall.

CTA Placement

Experiment with CTA placement and product positioning to optimize gaze flow and lift conversion.

Social-Proof Impact

Measure how ratings, reviews and "#1 Choice" badges affect visual attention and purchase intent.

Static vs Video

Compare static ads with short-form video on TikTok, Instagram and YouTube for engagement.

Menu Simplicity

Test menu simplicity and visual hierarchy to reduce cognitive load and improve intent.

Platform-Specific

Run ads on mobile and social platforms to reflect real-world, multi-screen viewing.

HEADLINE ENGAGEMENT Version B wins "FEELING LOW?" generated 75% more headline dwell time and 1.7× more fixations - the only statistically significant finding. F(1,4)=9.95, p=0.035★. H1 supported.	EVERYTHING ELSE Version A wins Superior product recall (67% vs 0%), logo noticeability (100% vs 67%), social proof engagement (6.3 vs 1.0 fixations), CTA reach, and perceived clarity (6.0 vs 4.7).	HYBRID VERSION C Recommendation Adopt B's emotional headline in A's product-forward layout. Big Mac at eye-level + ≤3 keyword specs + '#1 Choice' social proof badge. Test at N≥30 on mobile.
---	--	---

The "Vampire Effect" Version B's face captured gaze instantly (TTFF 0ms) but crowded out product encoding, social proof, logo, and CTA proving that dominant visual elements can suppress recall of all surrounding content.

C

Bee Swarm A

Gaze point distribution (bee swarm) for Version A - Product-Focused stimulus. Each dot represents a single fixation event.

D

Bee Swarm B

Gaze point distribution (bee swarm) for Version B - Emotion-Focused stimulus. Note concentration on face AOI.

F

ANOVA Test

One-Way ANOVA statistical test results. Full output including F-statistics and p-values for all measured metrics.

ANOVA results

One-Way ANOVA +
Mann-Whitney U

Why ANOVA? One-Way ANOVA compares means across two independent groups (Version A vs. B). Mann-Whitney U used as non-parametric check - n=3 per cell means normality cannot be verified. Results are exploratory.

Measure	Version A	Version B	F-statistic	p-value	Result
Headline Fixation Dwell (ms)	M = 972	M = 1,700	F(1,4) = 9.95	p = 0.035 ★	SIGNIFICANT
Social Proof Dwell (ms)	M = 1,684	M = 508	F(1,3) = 4.06	p = 0.137	Large effect, n.s.
Purchase Intent (1–5 scale)	M = 2.0	M = 1.3	F(1,4) = 0.40	p = 0.563	Not significant
Ad Clarity (1–10 scale)	M = 6.0	M = 4.7	F(1,4) = 0.24	p = 0.651	Not significant

★ Only Headline Fixation Dwell Time reaches statistical significance. All other results are directional only - N ≥ 15 per cell is required for inferential conclusions.

G

Brand Recognition

Post-exposure brand recognition survey results. Measures unaided and aided recall of McDonald's brand elements.

Q2 · Brand recognition

What brand was shown in the advertisement?

■ McDonald's — 6

H

Headline Recall

Post-exposure headline recall data.
Compares recall rates for Version A ('Feel the Crunch') and Version B ('Feeling Low?') headlines.

Q3 · Headline recall (open text)

What was the main headline or message of the ad?

"Feeling Low?"

"Bite into This"

"Billion was all I saw"

"Something about first bite"

Don't remember (×2)

Product Identification

Product identification accuracy rates - correctly identifying the Big Mac after ad exposure, by stimulus version.

Q4 · Product identification

What product was featured in the ad?

■ Burger / Big Mac — 4 ■ Fries / French Fries — 2

Q5 · Ad tone

Overall tone (1-4 scale)

1 = Very neg. 2 = Somewhat neg. 3 = Neutral
4 = Positive

Q6 · Ad clarity

Clarity rating (1-10)

K

Demographics

Full demographic breakdown of the study sample. Age, gender, education, and fast food consumption frequency.

Q7 · Demographics

How do you identify your gender?

- Female (2) — 3 ■ Male (1) — 2
■ Non-binary (3) — 1

Q8 · Demographics

What is your age range?

- 18-24 (2) — 3 ■ 25-34 (3) — 2
■ Under 18 (1) — 1

Purchase Behaviour

Purchase behavior patterns including fast food frequency, McDonald's purchase recency, and spending habits.

Q9 · Purchase behaviour

After viewing this ad, how likely are you to purchase the advertised product?

■ Not likely (1) — 4 ■ Somewhat unlikely (2) — 1 ■ Likely (4) — 1

M

Behaviour

General consumer behavior patterns including media consumption, dining preferences, and convenience orientation.

Q10 · Behaviour

How often do you eat fast food per week?

■ 4-5 times (5) — 3 ■ Less than once (1) — 2 ■ 3-4 times (4) — 1

N

Recency

Recent McDonald's purchase recency data. ~67% of participants had purchased McDonald's within the past week.

Q11 · Recency

Have you purchased a McDonald's product in the last 30 days?

■ No (2) — 4 ■ Yes (1) — 2

O

Purchase Intent

Purchase intent ratings (1-5 scale) after exposure to each stimulus. Version A: M=2.0, Version B: M=1.3 (not significant, $p=0.563$).

Q12 · Intent

How likely are you to purchase fast food within the next week?

■ Likely (4) — 3 ■ Somewhat unlikely (2) — 2 ■ Not likely (1) — 1

Media consumption channel data. Social media was the most common advertising channel among respondents.

Q13 · Media

Where do you typically encounter fast food advertising?

■ Social media (1) — 4 ■ TV (3) — 1 ■ Online ads (2) — 1

APPENDIX Q

Q

AOI Metrics

Complete chart set for all Areas of Interest metrics across both ad versions.

★

KEY FINDING

Only Headline Fixation Dwell Time reached statistical significance

$F(1,4) = 9.95, p = 0.035$

Face and Product AOIs draw the most attention across both fixation count and dwell time metrics.
